DEVHINTS.IO Edit

Bash scripting cheatsheet

Parameter expansions

Substitution **Basics** Comments \${F00%suffix} Remove suffix # Single line comment name="John" echo \${name} Remove prefix \${F00#prefix} #=> "john" (substitution) echo \${name/J/j} #=> "Jo" (slicing) echo \${name:0:2} This is a \${F00%suffix} Remove long suffix #=> "Jo" (slicing) echo \${name::2} multi line echo \${name::-1} #=> "Joh" (slicing) comment \${F00##prefix} Remove long prefix echo \${name:(-1)} #=> "n" (slicing from right) echo \${name:(-2):1} #=> "h" (slicing from right) echo \${food:-Cake} #=> \$food or "Cake" \${F00/from/to} Replace first match \${F00//from/to} Replace all Substrings length=2 Replace suffix **\${F00/%from/to}** echo \${name:0:length} #=> "Jo" \${F00:0:3} Substring (position, length) **\${F00/#from/to}** Replace prefix \${F00:(-3):3} Substring from the right See: Parameter expansion Length Manipulation STR="/path/to/foo.cpp" # /path/to/foo echo \${STR%.cpp} \${#F00} Length of \$F00 echo \${STR%.cpp}.o # /path/to/foo.o STR="HELLO WORLD!" echo \${STR%/*} # /path/to echo \${STR,} #=> "hELLO WORLD!" (lowercase 1st Default values echo \${STR,,} #=> "hello world!" (all lowercase) echo \${STR##*.} # cpp (extension) echo \${STR##*/} # foo.cpp (basepath) STR="hello world!" \${F00:-val} \$F00, or val if unset (or null) echo \${STR^} #=> "Hello world!" (uppercase 1st echo \${STR#*/} # path/to/foo.cpp echo \${STR^^} #=> "HELLO WORLD!" (all uppercase) echo \${STR##*/} # foo.cpp \${F00:=val} Set \$F00 to val if unset (or null) echo \${STR/foo/bar} # /path/to/bar.cpp val if \$F00 is set (and not null) \${F00:+val} Show error message and exit if \${F00:?message} STR="Hello world" \$F00 is unset (or null) echo \${STR:6:5} # "world" echo \${STR: -5:5} # "world" Omitting the: removes the (non)nullity checks, e.g. \${F00-val} expands to val if unset otherwise \$F00. SRC="/path/to/foo.cpp" BASE=\${SRC##*/} #=> "foo.cpp" (basepath) DIR=\${SRC%\$BASE} #=> "/path/to/" (dirpath)

Loops

Basic for loop

```
for i in /etc/rc.*; do
  echo $i
done
```

Reading lines

```
cat file.txt | while read line; do
  echo $line
done
```

C-like for loop

```
for ((i = 0 ; i < 100 ; i++)); do
  echo $i
done</pre>
```

Forever

```
while true; do
...
done
```

Ranges

```
for i in {1..5}; do
    echo "Welcome $i"
done

With step size

for i in {5..50..5}; do
    echo "Welcome $i"
done
```

Functions

Defining functions

```
myfunc() {
    echo "hello $1"
}

# Same as above (alternate syntax)
function myfunc() {
    echo "hello $1"
}

myfunc "John"
```

Returning values

```
myfunc() {
    local myresult='some value'
    echo $myresult
}

result="$(myfunc)"
```

Arguments

```
$# Number of arguments

$* All positional arguments (as a single word)

$@ All positional arguments (as separate strings)

$1 First argument

$_ Last argument of the previous command

Note: $@ and $* must be quoted in order to perform as described. Otherwise, they do exactly the same thing (arguments as separate strings).

See Special parameters.
```

Raising errors

```
myfunc() {
   return 1
}

if myfunc; then
   echo "success"
else
   echo "failure"
fi
```

Conditionals

Conditions

[[X || Y]]

```
Note that [[ is actually a command/program that
returns either 0 (true) or 1 (false). Any program that
obeys the same logic (like all base utils, such as grep(1)
or ping(1)) can be used as condition, see examples.
[[ -z STRING ]]
                                       Empty string
[[ -n STRING ]]
                                   Not empty string
[[ STRING == STRING ]]
                                             Equal
[[ STRING != STRING ]]
                                         Not Equal
[[ NUM -eq NUM ]]
                                             Equal
[[ NUM -ne NUM ]]
                                         Not equal
[[ NUM -lt NUM ]]
                                         Less than
                                  Less than or equal
[[ NUM -le NUM ]]
[[ NUM -gt NUM ]]
                                       Greater than
[[ NUM -ge NUM ]]
                               Greater than or equal
[[ STRING =~ STRING ]]
                                           Regexp
((NUM < NUM))
                                 Numeric conditions
More conditions
[[ -o noclobber ]]
                          If OPTIONNAME is enabled
[[ ! EXPR ]]
                                              Not
[[ X && Y ]]
                                              And
```

Ог

File conditions

Exists	[[-e FILE]]
Readable	[[-r FILE]]
Symlink	[[-h FILE]]
Directory	[[-d FILE]]
Writable	[[-w FILE]]
Size is > 0 bytes	[[-s FILE]]
File	[[-f FILE]]
Executable	[[-x FILE]]
1 is more recent than 2	[[FILE1 -nt FILE2]]
2 is more recent than 1	[[FILE1 -ot FILE2]]
Same files	[[FILE1 -ef FILE2]]

Example

```
# String
if [[ -z "$string" ]]; then
 echo "String is empty"
elif [[ -n "$string" ]]; then
  echo "String is not empty"
  echo "This never happens"
# Combinations
if [[ X && Y ]]; then
fi
# Equal
if [[ "$A" == "$B" ]]
# Regex
if [[ "A" =~ . ]]
if (( $a < $b )); then
   echo "$a is smaller than $b"
fi
if [[ -e "file.txt" ]]; then
  echo "file exists"
fi
```

Arrays

Defining arrays

```
Fruits=('Apple' 'Banana' 'Orange')

Fruits[0]="Apple"
Fruits[1]="Banana"
Fruits[2]="Orange"
```

Operations

```
Fruits=("${Fruits[@]}" "Watermelon") # Push
Fruits+=('Watermelon') # Also Push
Fruits=( ${Fruits[@]/Ap*/} ) # Remove by regex match
unset Fruits[2] # Remove one item
Fruits=("${Fruits[@]}") # Duplicate
Fruits=("${Fruits[@]}" "${Veggies[@]}") # Concatenate
lines=(`cat "logfile"`) # Read from file
```

Working with arrays

```
echo ${Fruits[0]}
                           # Element #0
echo ${Fruits[-1]}
                           # Last element
echo ${Fruits[@]}
                           # All elements, space-separated
echo ${#Fruits[@]}
                           # Number of elements
echo ${#Fruits}
                           # String length of the 1st element
echo ${#Fruits[3]}
                           # String length of the Nth element
echo ${Fruits[@]:3:2}
                           # Range (from position 3, length 2)
echo ${!Fruits[@]}
                           # Keys of all elements, space-separated
```

Iteration

```
for i in "${arrayName[@]}"; do
  echo $i
done
```

Dictionaries

Defining

```
declare -A sounds

sounds[dog]="bark"
sounds[cow]="moo"
sounds[bird]="tweet"
sounds[wolf]="howl"

Declares sound as a Dictionary object (aka associative array).
```

Working with dictionaries

```
echo ${sounds[dog]} # Dog's sound
echo ${sounds[@]} # All values
echo ${!sounds[@]} # All keys
echo ${#sounds[@]} # Number of elements
unset sounds[dog] # Delete dog
```

Iteration

```
Iterate over values

for val in "${sounds[@]}"; do
    echo $val
    done

Iterate over keys

for key in "${!sounds[@]}"; do
    echo $key
    done
```

Options

Options

```
set -o noclobber # Avoid overlay files (echo "hi" > foo)
set -o errexit # Used to exit upon error, avoiding cascading errors
set -o pipefail # Unveils hidden failures
set -o nounset # Exposes unset variables
```

Glob options

```
shopt -s nullglob  # Non-matching globs are removed ('*.foo' => '')
shopt -s failglob  # Non-matching globs throw errors
shopt -s nocaseglob  # Case insensitive globs
shopt -s dotglob  # Wildcards match dotfiles ("*.sh" => ".foo.sh")
shopt -s globstar  # Allow ** for recursive matches ('lib/**/*.rb' => 'li
Set GLOBIGNORE as a colon-separated list of patterns to be removed from glob matches.
```

History

Commands

history	Show history
shopt -s histverify	Don't execute expanded result immediately

Operations

11	Execute last command again
!!:s/ <from>/<to>/</to></from>	Replace first occurrence of <from> to <t0> in most recent command</t0></from>
!!:gs/ <from>/<to>/</to></from>	Replace all occurrences of <from> to <t0> in most recent command</t0></from>
!\$:t	Expand only basename from last parameter of most recent command
!\$:h	Expand only directory from last parameter of most recent command
!! and !\$ can be replace	ed with any valid expansion.

Expansions

!\$	Expand last parameter of most recent command
i*	Expand all parameters of most recent command
!-n	Expand nth most recent command
!n	Expand nth command in history
! <command/>	Expand most recent invocation of command < command>

Slices

!!:n	Expand only nth token from most recent command (command is 0; first argument is 1)	
iv	Expand first argument from most recent command	
!\$	Expand last token from most recent command	
!!:n-m	Expand range of tokens from most recent command	
!!:n-\$	Expand nth token to last from most recent command	
!! can be replaced with any valid expansion i.e. !cat, !-2, !42, etc.		

Miscellaneous

Numeric calculations

```
$((a + 200))  # Add 200 to $a
$(($RANDOM%200))  # Random number 0..199
```

Inspecting commands

```
command -V cd
#=> "cd is a function/alias/whatever"
```

Trap errors

```
trap 'echo Error at about $LINENO' ERR

or

traperr() {
   echo "ERROR: ${BASH_SOURCE[1]} at about ${BASH_LINENO[0]}"
}

set -o errtrace
trap traperr ERR
```

Source relative

```
source "${0%/*}/../share/foo.sh"
```

Transform strings

-C	Operations apply to characters not in the given set
-d	Delete characters
-S	Replaces repeated characters with single occurrence
-t	Truncates
[:upper:]	All upper case letters
[:lower:]	All lower case letters
[:digit:]	All digits
[:space:]	All whitespace
[:alpha:]	All letters
[:alnum:]	All letters and digits
Example	
echo "Welcome To Devhints" tr [:lower:] [:upper:] WELCOME TO DEVHINTS	

Heredoc

```
cat <<END
hello world
END
```

Special variables

\$?	Exit status of last task
\$!	PID of last background task
\$\$	PID of shell
\$0	Filename of the shell script
\$_	Last argument of the previous command
\${PIPESTATUS[n]}	return value of piped commands (array)
See Special parameters.	

Check for command's result

```
if ping -c 1 google.com; then
  echo "It appears you have a working internet connection"
fi
```

Subshells

```
(cd somedir; echo "I'm now in $PWD")
pwd # still in first directory
```

Redirection

```
python hello.py > output.txt  # stdout to (file)
python hello.py >> output.txt  # stdout to (file), append
python hello.py 2> error.log  # stderr to (file)
python hello.py 2>&1  # stderr to stdout
python hello.py 2>/dev/null  # stderr to (null)
python hello.py &>/dev/null  # stdout and stderr to (null)

python hello.py < foo.txt  # feed foo.txt to stdin for python
diff <(ls -r) <(ls)  # Compare two stdout without files</pre>
```

Case/switch

```
case "$1" in
  start | up)
  vagrant up
  ;;

*)
  echo "Usage: $0 {start|stop|ssh}"
  ;;
esac
```

printf

```
printf "Hello %s, I'm %s" Sven Olga
#=> "Hello Sven, I'm Olga

printf "1 + 1 = %d" 2
#=> "1 + 1 = 2"

printf "This is how you print a float: %f" 2
#=> "This is how you print a float: 2.0000000"
```

Directory of script

```
DIR="${0%/*}"
```

Getting options

```
while [[ "$1" =~ ^- && ! "$1" == "--" ]]; do case $1 in
   -V | --version )
    echo $version
    exit
    ;;
   -s | --string )
    shift; string=$1
    ;;
   -f | --flag )
    flag=1
    ;;
esac; shift; done
if [[ "$1" == '--' ]]; then shift; fi
```

Reading input

```
echo -n "Proceed? [y/n]: "
read ans
echo $ans

read -n 1 ans # Just one character
```

Go to previous directory

```
pwd # /home/user/foo
cd bar/
pwd # /home/user/foo/bar
cd -
pwd # /home/user/foo
```

Grep check

```
if grep -q 'foo' ~/.bash_history; then
  echo "You appear to have typed 'foo' in the past"
fi
```
